

ABSTRACT OF THE DISCLOSURE

An applicator is configured to apply a substance on a portion of the human body and comprises an applicator element. The applicator element comprises at least two walls forming therebetween a cavity suitable for retaining the substance, at least one slot that extends along a longitudinal axis and through which the substance contained in the cavity is dispensed in order to be applied, and at least one opening whereby the cavity opens to the outside. In embodiments, the opening comprises at least one portion with a width in a plane extending transversely to the slot that is greater than a width of the slot in the same plane.
